

TITLE PAGE

- Problem Statement ID:

26143
- Problem Statement Title:

Leveraging satellite imagery to determine Oil spills at sea along with AIS data correlations to identify vessel responsible for the spill.
- Theme:

Disaster Management
- PS Category:

Software
- Project Name:

MARIS-TRACER (Multi-Modal Oil Spill Source Attribution)
- Organization / Ministry:

National Technical Research Organisation (NTRO)
- Team ID:

_____ (Left blank as per SIH guidelines)
- Team Name:

Team MARIS

MARIS-TRACER

Decision Support Framework

1. Deep SAR Vision

U-Net capillary wave dampening segmentation on Sentinel-1 SAR.

2. 4D Hydrodynamics

Backward particle tracking (OpenDrift) under wind & currents.

3. AIS Correlation

Spatiotemporal vessel trajectory query & candidate ranking.

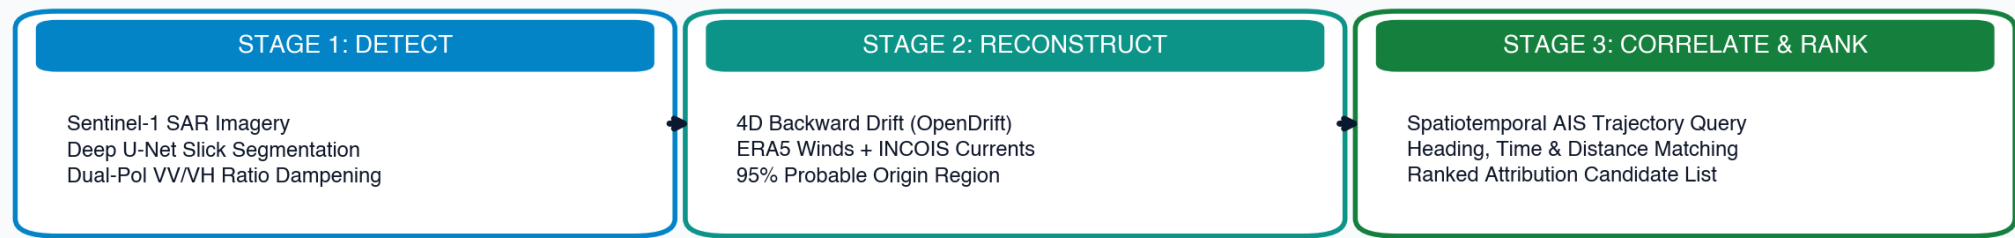

4. Decision Support

Evidence-backed report generation for Coast Guard / NTRO.

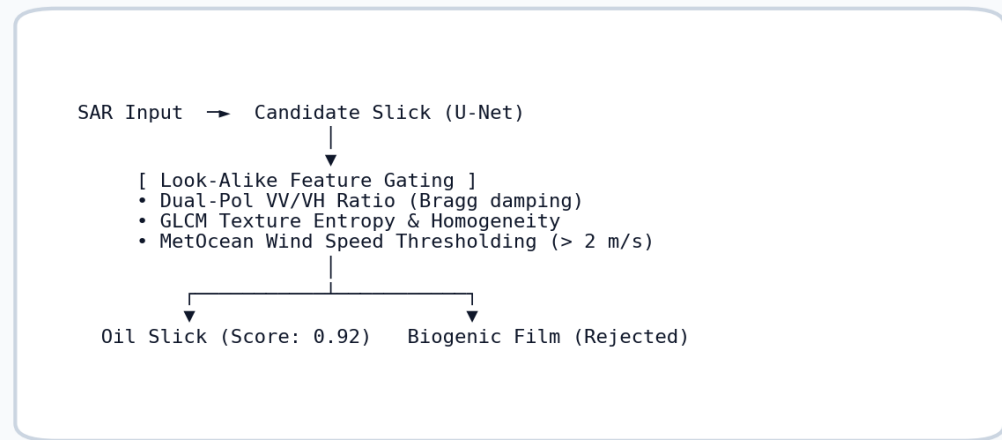

PROPOSED SOLUTION - FROM DETECTION TO SOURCE ATTRIBUTION

Idea Title: MARIS-TRACER

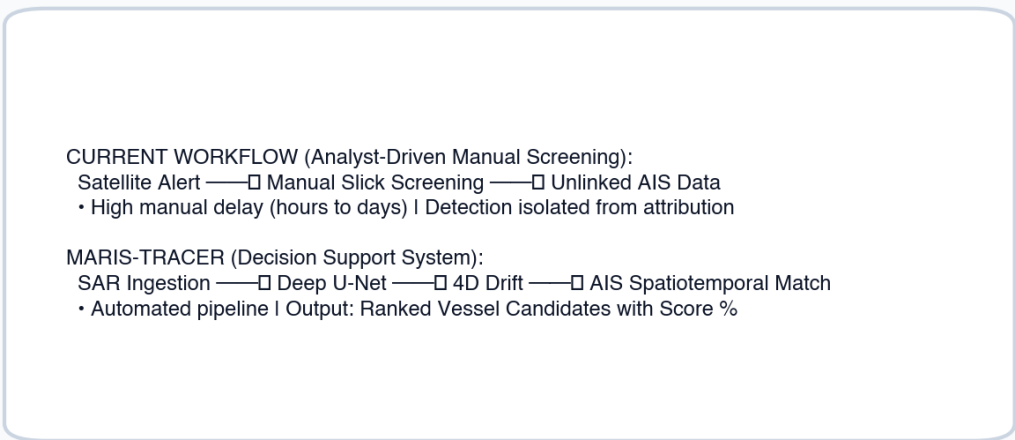

PROPOSED 3-STAGE ATTRIBUTION PIPELINE

FALSE-POSITIVE LOOK-ALIKE REJECTION GATING

WORKFLOW COMPARISON: CURRENT VS MARIS-TRACER

TECHNICAL APPROACH - SYSTEM ARCHITECTURE & SCOPE

Idea Title: MARIS-TRACER

SYSTEM SCOPE: HACKATHON MVP VS ADVANCED PHASE

HACKATHON MVP (36-Hour Core - MUST WORK)

- Sentinel-1 GRD SAR Ingestion + SNAP Speckle Filter
- PyTorch U-Net Deep Learning Slick Segmentation
- 2D/3D Backward Particle Drift (ERA5 + INCOIS Currents)
- Spatiotemporal AIS Trajectory Bounding Query (PostGIS)
- Explainable Proximity Ranking + Interactive GIS Dashboard

ADVANCED PHASE (Post-Hackathon / If Time Permits)

- Bi-Temporal OSCD Change Detection & Multi-sensor Fusion
- 10,000 Particle Monte Carlo Ensemble Dispersion
- Dark-Ship Kinematic Dead Reckoning & Wake Detection
- Automated PDF Forensic Evidence Report Generation
- Real-Time Live NMEA/AIS Stream Parser Integration

TEAM EXPERTISE & MODULE OWNERSHIP MATRIX

Role / Expertise	Primary Responsibility	Tech Stack & Core Deliverable	Hackathon Owner
ML / CV Lead	SAR Preprocessing & U-Net Slick Segmentation	PyTorch, OpenCV, GDAL, Albumentations	Member 1
Hydrodynamics Lead	Ocean Current Forcing & Particle Backtracking	OpenDrift, PyGNOME, NetCDF4, SciPy	Member 2
Maritime GIS Lead	AIS Trajectory Indexing & Spatial Queries	PostgreSQL/PostGIS, GeoPandas, H3	Member 3
Full-Stack Lead	Backend API, Interactive Map UI & Report Engine	FastAPI, React, Mapbox GL JS, Leaflet	Member 4 & 5

FEASIBILITY & VIABILITY - DATA STRATEGY & RISK MITIGATION

Idea Title: MARIS-TRACER

DATA VIABILITY: DEMONSTRATION-FEASIBLE

REAL / PUBLIC OPEN-ACCESS FEEDS:

- Sentinel-1 SAR GRD (ESA Copernicus API)
- ERA5 Hourly 10m Surface Winds (ECMWF CDS)
- INCOIS OSFS Daily Surface Current Velocity Grids

DEMONSTRATION FALLBACK STRATEGY:

- Public/Historical AIS Datasets (NOAA MarineCadastre / GFW)
- Synthetic AIS Vessel Trajectory Generator (for live testing)
- Ensures 100% reliable 36-hr hackathon prototype demo.

DEPLOYMENT & HARDWARE REQUIREMENTS

ZERO VESSEL HARDWARE REQUIRED:

- Operates entirely via remote satellite sensing and AIS.
- No physical sensors or equipment installed on vessels.

COMPUTE & HOSTING STACK:

- Single workstation / cloud instance with NVIDIA GPU.
- 1-Click Docker Compose deployment containerizing:
FastAPI Backend + PostgreSQL/PostGIS + React WebGIS UI.

KEY TECHNICAL RISKS & PRACTICAL MITIGATION STRATEGIES

RISK 1: Look-Alike Slicks

Challenge: Algae, biogenic films, and low-wind areas dampen radar waves. Challenge: Perpetrators disable AIS transponders (~6% of global fleet).

Mitigation: Dual-Pol VV/VH ratio + GLCM texture entropy + ERA5 wind speed. Mitigation: Kinematic dead reckoning from past waypoints + SAR vessel targeting.

RISK 3: Hydrodynamic Drift Error

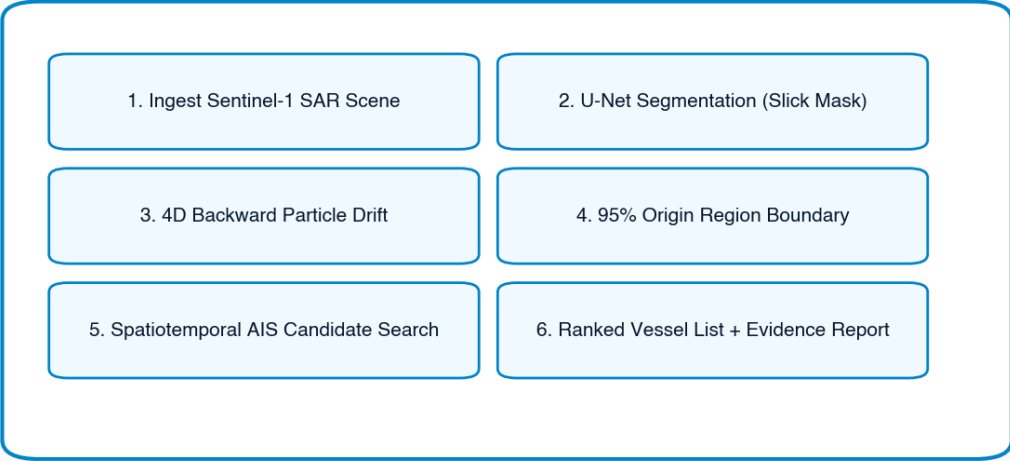

Challenge: Ocean current turbulence and wind gust forecasting inaccuracies.

Mitigation: Multi-particle Monte Carlo ensemble deriving a probabilistic 95% origin region.

IMPACT & BENEFITS - EVALUATION PLAN & STRATEGIC VALUE

Idea Title: MARIS-TRACER

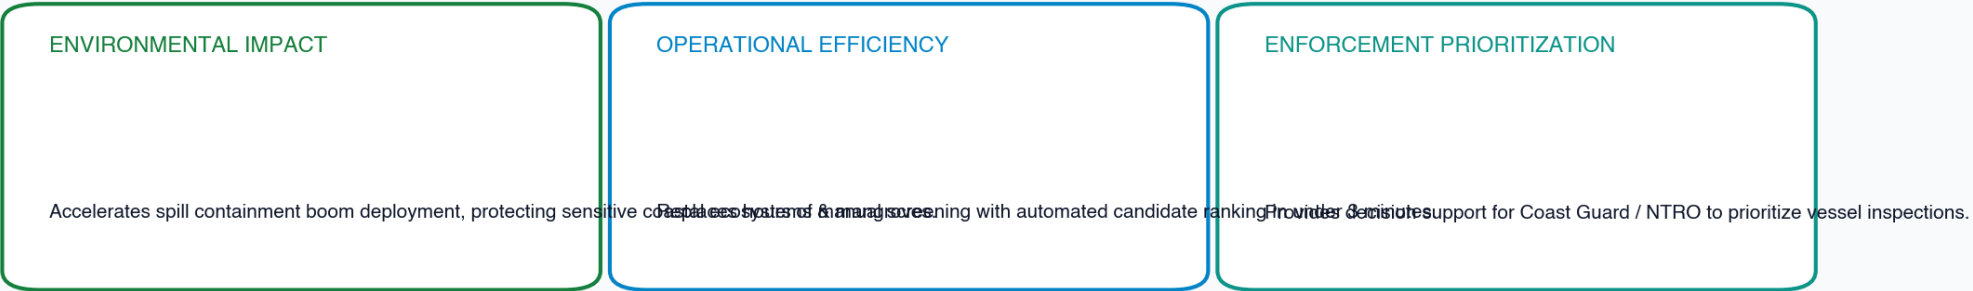

END-TO-END 6-STEP HACKATHON DEMO FLOW

EVALUATION PLAN & TARGET METRICS

Module	Target Metric	Target Goal
Slick Segmentation	Dice / mIoU	≥ 0.78
Look-Alike Rejection	False Positive Rate	≤ 12%
Origin Drift Error	Median Error Distance	≤ 4.5 km
Vessel Attribution	Top-3 Recall	≥ 85%

MULTI-DIMENSIONAL STRATEGIC BENEFITS
